

Nivis WirelessHART Development Kit

Fast track your WirelessHART product development. The Nivis WirelessHART Development Kit allows developers, integrators, and OEMs to quickly integrate their product to the WirelessHART standard. The kit also provides customers with the ability to evaluate the performance of the WirelessHART stack and features such as Graph Routing.

Advantages:

- The Nivis system architecture supports the WirelessHART stack.
- Provides wireless monitoring and control over industrial and commercial applications with a standards based, highly reliable network.
- End-to-End System includes: Access Point, Gateway, Network and Security Manager Processes.

The Kit Includes:

- 1 x VersaRouter 910 (VR910)
- 3 x VS220 (Development Board)
- 1 x VL10 (Low power Loop Board)
- 1 x Provisioning tool
- Documentation:
 - Integration API
 - MCS User Guide
 - WirelessHART Development Kit Guide
- 10 Hours phone and web support
