

Product and Network Architecture Services

Product and Network Architecture Services

- Centero provides consulting services covering all aspects of product and network architecture
- Our team successfully architected, designed, developed and deployed complex ISA100 Wireless compliant and certified field instruments and networks
- Centero's architecture services help ensure that the architecture, features and functionality of the ISA100 Wireless instrument or network are correct before investing money, resources and time
- Minimize learning curve by relying on our team of product and network architects with in-depth ISA100.11a standard technical knowledge

Product Architecture Services

- Formulate ISA100 Wireless field instrument and network requirements
- Create ISA100 Wireless instrument architecture
- Map requirements into ISA100 Wireless standard mechanisms and data structures
- Estimate instrument battery life
- Define project plan and estimate product development costs

Product and Network Architecture Deliverables

- Product and Network Architecture deliverables include the following:
 - Product requirements documents (PRD)
 - Product and network architecture document
 - Product feasibility study
 - Battery life estimations based on product requirements
 - Project plan and timeline
 - Detailed project cost estimates

Product and Network Architecture Packages

Silver Package

ISA100 Wireless Product Requirements

Identify ISA100 Wireless product/network requirements and generate PRD

ISA100 Wireless Instrument Architecture

Formulate instrument/product and network architecture based on requirements

ISA100 Wireless Standard Mapping

Map product requirements and architecture into ISA100 Wireless standard compliant mechanisms and data structures

Gold Package

ISA100 Wireless Product Requirements

Identify ISA100 Wireless product/network requirements and generate PRD

ISA100 Wireless Instrument Architecture

Formulate instrument/product and network architecture based on requirements

ISA100 Wireless Standard Mapping

Map product requirements and architecture into ISA100 Wireless standard compliant mechanisms and data structures

Battery Life Estimates

Calculate battery life estimates based on product requirements

Project Plan and Costs

Formulate project plan, timeline and provide cost estimates
